

SUCCESS STORY - QUARRY

TURNKEY® Rhino

5 x TKN15 1590 A10° PR-R with TKWH 50 & TKSH EXC 320 90 C+L+R shrouds

Indonesia
Extraction of gold
KOMATSU PC-1250

CUSTOMER'S OBJECTIVES

The customer, who was initially equipped with the original system, was dissatisfied due to premature wear.

Based on his successful experience with our TURNKEY® Rhino products on other machines, he decided to switch to Feurst.

He first decided on the PR shape, which offered an excellent compromise between abrasion resistance and good penetration in highly abrasive materials. He then switched to the PR-R, which is even more resistant to abrasion, to extend the lifetime of his teeth. The results far exceeded his expectations.

“ RESULTS

Thanks to the optimised PR-R shape combined with TKSH EXC shrouds, our customer benefits from improved penetration, excellent impact resistance and enhanced abrasion resistance.

Extra-long-life adapters and shrouds reduce machine downtime, while bucket loading performance is optimised.

Assembly and disassembly? Safe and quick, with captive teeth for excellent service life.
